

# WIDGET INSTALLATION INSTRUCTIONS

By MuseShop.net

## Removing old versions of widgets

If you are installing a newer version of a widget you already have, Muse will not overwrite the old version but instead it will duplicate the widget. This is why it's best to delete the older widget version prior to installing the new one.

While the widget you want to delete is selected, click the trash can icon. This will only delete the widget from Muse, it will not delete the file from your computer.

## Installing widgets

1. Open the .zip file
2. Double-click the .mulib file
3. This will install the widget inside "Library" panel inside Muse, under "!MuseShop.net..." folder
4. If you don't see the "Library" panel inside Muse, click "Window" and then "Library"
5. Now you can drag-and-drop any widget on the canvas and work with it

## Terms of use

All content made available on MuseShop.net, including but not limited to templates, widgets, content blocks, library files, icons, images, graphic styles, paragraph styles, custom code, audio content, video content, AI files, PSD Files, layer styles, patterns, textures, animations and web elements are made for use in both personal and commercial projects. You are not permitted to make the resources found on MuseShop.net available for distribution elsewhere without prior consent. Play fair and help us in our work by not sharing our files.
